CFG-PTE: analytic mathematical check only; no image model or semantic erasure test
(a) Exact terminal distributions, CFG=3
Original CFG
Tilt without retention
Constrained transport
Retained coordinate y
Terminal risk coordinate x
(b) Guidance-dependent retention
Change in terminal E[y]
Constrained transport
Tilt without retention
Keep x correction only
Reuse correction from CFG=3
External true CFG coefficient
(c) Risk reduction and the retention tradeoff
Change in terminal E[x]
Tilt without retention
Constrained transport
Keep x correction only
Reuse correction from CFG=3
External true CFG coefficient
(d) Retain the future semantic, not a local axis
Change in E[f_t(z)], CFG=3
Constrained transport
Tilt without retention
Keep x correction only
Flow time t (noise to data)
